

# CROSSFORM<sup>®</sup> Exporter

**Off the cuff reporting capabilities in a protected environment.**

**Designed to empower CrossForm professionals with a reporting tool for acquiring large quantities of data in a secure environment.** CrossForm Exporter looks and feels much like typical database SQL query tools. Unlike other SQL query tools which run with security risks and the potential of disabling a database, CrossForm Exporter defines and controls access to available information. CrossForm Exporter empowers you with flexibility to adjust with ever-changing reporting requirements in a secure environment.

**Reduce Risk** with the added layer of protection only available from the software manufacturer.

**Take away Server Strain** with pre-defined joins

**Eliminate Mistakes** with pre-defined joins between tables and database

**Gain control** of your data and generate the reports *you* need

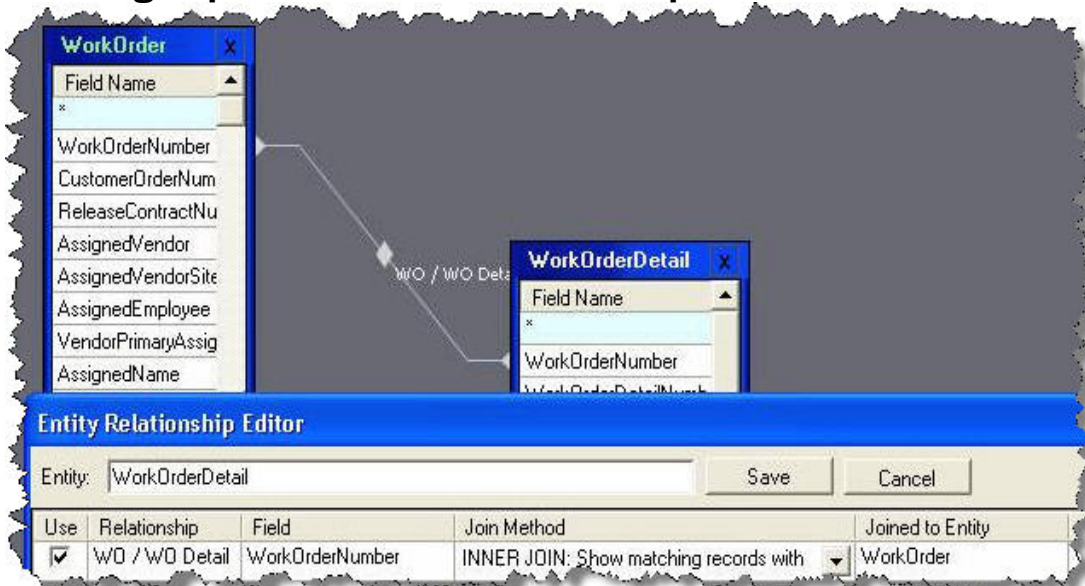

**Create and save multiple projects** using the query builder.

**Export a project** save an XML file copy to your hard drive and use for support issues, portability, and an alternative to saving the projects to the database.

**Recent project feature** conveniently displays the last four projects used.

**Manage** and set result record limits

**Creating Reports is a breeze with the Exporter**

**Ad hoc reporting at your fingertips**

**Contact us at 800.337 2645 to get started.**
